

## Team, the New Desk for Work Spaces from Expormim

Versatility in work environment and multifunction spaces fit with the nature of Team modular desk designed by Mario Ruiz, such as functional and adaptable that it seems to have been custom-made. Thanks to its modularity, Team desk allows for create multiple combinations, playing with symmetrical or asymmetrical forms of the shelves in the top.

The Team modular desk is made of solid wood from European oaks; its bevel is its most distinctive characteristic. The top can be customized by using natural stone or wide upholstery. The Team collection is also available in a lacquered version (MDF) and with the lower module with folding doors.

According to Mario Ruiz, material of choice is highly important considering that “nothing would be as it is in this collection without the material it is made of: solid wood. Wood gives identity to the pieces; it is the starting point, the reason of every detail in the project. Because this design is based on the details and they can only be constructed thanks to the material. At the same time, this collection is inspired by Expormim’s long-standing tradition in handcrafted rattan and seeks dialogue with it”.

TEAM modular desk designed by Mario Ruiz.
